

Transportation System Plan

The Transportation System Plan was authorized by the City to address the needs of the transportation system over the next 20 years. It is designed to help in establishing a capital improvement and capital maintenance plan for the transportation system. The report provides descriptions of the recommended improvements and an opinion of probable project cost for each item. For the current plan, the pedestrian portion of the plan was completed in November of 1998, and the street portion was completed in July of 2000. A new master plan is underway by DKS Associates of Portland and is expected to be completed mid-2008.
