Description of Proposal

The Lake Oswego/Tigard Water Partnership is proposing to construct a water pipeline stretching from the Willamette River through current and proposed easements in Mary S. Young Park and in right-of ways through the Robinwood Neighborhood and Hwy. 43 to the West Linn City limits (Maps are enclosed). The proposed water line will be approximately 48 inches in diameter.

Mary S. Young Park Area

The city of Lake Oswego currently has a 25-foot wide utility easment through Mary S. Young Park. The route of the new water line will genreally parellel the existing water line. Lake Oswego will aquire additional utility easement area to accommodate the new line. Within the current and proposed easements the disturbance area will be between 40 and 50 foot wide. The temporary disturbance area will be used for construction, access, placement of the pipe, fill material and construction equipment. Additionally, Lake Oswego wil construct temporary access into the park to move in construction equipment and materials and to stage the construction activity. This acess easement will be within the current and proposed easements. Lake Oswego will aquire additional utilty easements adjacent to our current easements and on parcel 21E24AC00100 (Owned by the State of Oregon Parks and Rec. Department).

West Linn Right-of-Way

Our proposed new water line will generally follow the path of our current water line in West Linn the right-of way. The one possible exception may be in the Robinwood Neighborhood. Upon exiting the water treatment plant the line would either run up Mapleton Dr. or Kenthrope Way. (depending on the placement of the proposed underground clearwell) to Hwy. 43. The water line would then parallel our current line through the West Linn City limits and into Lake Oswego.
