(This is a draft only, so please ignore formatting and bullets)

Reduce, Repair, Reuse, Recycle

The last thing you should do is recycle. Consider these alternatives before you commit an item to the recycle bin.

- 1. **Reduce** the amount you consume. Much of what we consume is "single-use" items, which are tossed into the garbage, or recycle bin. Shopping for food in bulk or minimally packaged is a good start. Avoiding single-use plastic packaging such as clamshells and clear plastic tubs whenever possible. Also try to avoid over-packaged items.
- 2. **Repair** items that are broken or no longer working. Find a Repair Fair in your area. If repair is not feasible, try to repurpose the item for a different use.
- 3. **Reuse** items as much as possible. Grocery bags, plastic produce bags, coffee bags, nursery pots etc. Try to use an item as much as possible before you send it downstream.
- 4. **Recycle** items only when you have exhausted all of the previous possibilities. And when you do recycle, be sure that only acceptable items are put into the curbside recycle bin. For items that cannot go into the curbside bin, see "Recycling outside of the bin."

Transpo	
	of fossil fuels for transportation is one of the greatest contributors to climate change. One of
	st ways to reduce the use of fossil fuels is to transition to electric energy generated by clean,
	le resources. The following sites offer ways to reduce your transportation energy usage, and to
transitio	n to clean energy.
	red clean energy.
