

**Willamette Neighborhood
Selective Reconnaissance-level Survey
West Linn, Clackamas County, Oregon**

February 21, 2012

Survey conducted by:

Jason M. Allen
Historic Preservation Specialist
SWCA Environmental Consultants

Report Prepared by:

Jason M. Allen
Historic Preservation Specialist
SWCA Environmental Consultants

Objectives

This project was funded in part with a Certified Local Government (CLG) grant funded by the National Park Service, U.S. Department of the Interior, and coordinated through the Oregon State Historic Preservation Office (SHPO). The project's purpose is to identify buildings that may have historical significance to the city and supplement existing historic resource surveys. The new information on the properties will be added to the City's historic resource inventory and the State's Historic Sites Database. To that end, SWCA Environmental Consultants conducted a reconnaissance-level survey of 250 selected properties within the Willamette Neighborhood of the City of West Linn that were built in 1965 or earlier. In addition, the project supplemented the information on 44 properties previously surveyed (some of which were subsequently listed in the National Register of Historic Places as the Willamette Historic District) with additional information on accessory structures. The purpose of this portion of the project was to provide documentation and historic district contribution of these secondary structures.

Methodology

The Willamette Neighborhood Selective RLS consisted of 250 previously un-inventoried residential properties within the Willamette Neighborhood of the City of West Linn, all of which were on file in the West Linn Planning Department records as having been built in 1965 or earlier. Additional information was collected on accessory structures on 44 properties within the Willamette Historic District that Planning Department records indicated included accessory structures, but for which no accessory structure data had been collected during previous surveys.

The survey was conducted between November 30 and December 3, 2011 by Jason M. Allen. Prior to fieldwork, existing GIS geospatial data including property boundary and building

footprint shape files, as well as existing parcel data (including construction date, address, and tax identification number, etc) was combined with existing information imported from the Historic Properties Database maintained by the SHPO and loaded into a customized ArcGIS interface designed to run on a Trimble GeoXT GPS unit with sub-meter accuracy. The Trimble unit was pre-loaded with the survey boundaries, properties to be surveyed, and forms derived from the SHPO Historic Properties Database. The survey information collected was loaded into the Trimble unit, and each entry was associated with a digital photo number. The Trimble unit was also pre-loaded with the Historic Properties Database data for inventory entries to be updated with additional information regarding accessory structures. Upon completion of the data collection portion of the project (fieldwork), the data was imported and the Historic Database populated with the data. Maps were automatically generated and photos automatically associated with the proper database entries through the system developed by SWCA. The project was conducted in compliance with the latest “Guidelines for Conducting Historic Resource Surveys in Oregon” (July 2011).

Survey Boundaries

All of the properties inventoried during this project are within the Willamette Neighborhood of the City of West Linn, an irregularly-shaped neighborhood roughly bounded by the Willamette River on the south and southeast, the Tualatin River on the west and southwest, the I-205 corridor on the north (east of 10th Street), the Savannah Oaks Neighborhood to the east and northeast, and unincorporated Clackamas County on the north. The properties inventoried were selected based on their age (built in 1965 or earlier), and so the properties inventoried were scattered across the Willamette Neighborhood, grouping in some areas developed before 1965, and scattered among newer buildings in other areas, where development occurred subsequent to the construction of the earlier historic residences.

Historical Overview

In 1829, the foundation of what was to become the City of Oregon City was laid when John McLoughlin, Chief Factor of the Hudson’s Bay Company claimed two square miles of land on the east side of Willamette Falls, and built a sawmill. Oregon City developed as the western terminus of the Oregon Trail, and in 1844 was selected as the provisional capital at the Champoege Meetings which also formed a provisional government for the region. In the late 1840s, two communities on the west side of Willamette Falls were established, Multnomah and Linn City, both of which were destroyed by fire and flood in 1861. Development of a new community on higher ground on the west side commenced soon after, and became the foundation of the city of Willamette Falls, subsequently renamed Willamette, which was platted in 1893. In 1913, several platted communities on the west side of Willamette Falls incorporated as the City of West Linn, and 1916 the community of Willamette merged into the City. Many residences in the Willamette neighborhood, therefore, date to the period before and after platting of the community, with subsequent expansion following the merger into the City of West Linn.

Data Summary

The 2011 Willamette Neighborhood Selective Reconnaissance-level Survey resulted in two distinct datasets corresponding to the two major focuses of the project, the survey of 250 previously un-inventoried residential properties, and the inventory update of 44 previously-inventoried properties. Of the 41 previously-inventoried properties, data was collected only on accessory buildings, including detached garages (by far the most commonly observed), sheds, small animal shelters (such as chicken coops), greenhouses, and recreational structures (such as gazebos). A total of 23 properties were found to include at least one accessory building that contribute to the overall property's eligibility for listing in the NRHP as a contributing property to the larger Willamette Historic District. A total of 21 were found to contain at least one non-contributing accessory building, and three were found to contain at least one contributing and one non-contributing accessory building.

Results for the survey of 250 previously un-inventoried buildings is presented below, incorporated into the project results as a whole (consisting of 294 observed properties). Results figures are derived from the Oregon Historic Sites Database resulting from this project, to which all observed properties are associated. The results generated from the database thus reflect the total of all inventoried buildings within the combined survey areas.

The spread of construction dates reflected in the results for the 294 properties observed during this project mirror trends seen elsewhere in Oregon. A total of 10% of the buildings inventoried were built before 1910, representing the period before the formal platting of Willamette in 1913, and the subsequent merger with the City of West Linn in 1916. A spike in the number of buildings built in the 1910s and 1920 reflects the growth of the community following incorporation and during the period of general prosperity in Oregon (and much of the United States). This peak in the 1920s is followed by a decline in construction, reflected in the depressed number of buildings in the survey area that were built during the 1930s. This decline in construction is also reflected throughout Oregon and much of the United States, resulting from a nationwide (and indeed, global) economic depression. The decline of the 1930s is followed by a period of acceleration, peaking in the 1950s, reflecting the post-World War II construction boom. The last decade for which data exists in any meaningful quantities is the 1960s, which appears to indicate a decline from the 1950s peak. This is deceptive, and reflects only half of the decade at most (the closing date for inclusion in the survey was 1965), and so a closer analysis suggests that residential construction certainly kept pace with, and likely exceeded that observed during the 1950s. It should be noted, however, that such analysis can only be relied on to indicate rates of construction, since the dataset only includes buildings that survive to the present, a number that declines the further back into history one looks.

Of the 294 properties included in the survey, a total of 140 properties were found to be eligible/contributing, meaning they would be considered to be contributing elements to a historic district, were one found to be present. A total of 139 were found to be not eligible/not

contributing, meaning they would not contribute to such a district, due to a loss of integrity. A total of five were found to be eligible/significant, meaning they would likely be eligible for listing in the NRHP individually. Nine were found to be not eligible/out of period, meaning they would not contribute to such a district because they are not of the historic period (at the time of the survey), and one was found to have been demolished. Due to the nature of the selection of the properties (by construction date), these results do not indicate the absence or presence of such a historic district. Such a historic district may exist, if delineation of the boundaries of a district were drawn to include a majority of buildings within it that contribute to the district. A brief analysis of the distribution of eligible/contributing resources among properties determined to be non-contributing or out-of-period does not indicate the presence of such a district, outside of the existing Willamette Historic District.

Commonly observed alterations to historic properties are reflected in the Oregon Historic Sites Database. A total of 178 properties demonstrated replacement of windows with vinyl windows, over 60%. Aluminum windows were observed on many (though not nearly as many) buildings as well, but many of these are seen in buildings originally constructed in the late 1950s and early 1960s, and may be original to the house. Likewise, a relatively high proportion of buildings, a full 25% of those surveyed, have been resided with vinyl siding (73 out of 294), making these two alterations by far the most significantly represented form of alteration observed.

Recommendations

- Continue with Reconnaissance-level survey as needed to complete and maintain the historic properties inventory within the City of West Linn.
- Amend the existing Willamette Historic District NRHP Registration to include the data collected on contributing accessory buildings.
- Expand or supplement the walking tour literature to include key definitions of historic style and form.
- As additional data is incorporated during the coming years, and more resources constructed during the 1960s enter the historic period, watch for the possible emergence of a mid-century or modern-period historic district.
- Host or facilitate workshops on the maintenance and repair of historic wood windows to encourage those with properties containing intact wood windows to retain/repair them, rather than replace them with vinyl.

Cover Sheet

for
Reconnaissance Level Surveys

Submit this Cover Sheet to the Oregon SHPO along with all survey materials (see checklist below).

Survey Project Name	2011 West Linn Selective RLS	Survey Start Date	11/28/2011
City	West Linn	County	Clackamas
Survey Type	Selective RLS	Survey End Date	12/1/2011
Survey Sponsor	City of West Linn, 22500 Salomo Road, West Linn, OR 97068, Phone: 503-657-0331	Year Completed	2011
Surveyor Name	SWCA Environmental Consultants, 1220 SW Morrison Street, Suite 700, Portland, OR 97205 Phone: 503-224-0333	Date Submitted to SHPO	
# Elig. properties	145	# Ineligible properties	149
		Acreage Surveyed	

Survey Boundaries	The selective RLS consisted of 250 previously un-inventoried properties within the Willamette Neighborhood of the City of West Linn. Because the survey properties were selected to include properties meeting a 45-year age criterion, and not previously-inventoried, the properties are scattered about the Willamette Neighborhood of the City of West Linn.
Survey Summary/Comments	The selective RLS included 250 properties identified by the City of West Linn as having been built 1965 or earlier, and which were not previously inventoried. Of these, one was demolished, 115 were evaluated as Eligible/Contributing, 133 were evaluated as Not Eligible/Not Contributing, and one was built after 1965. Because the survey only looked at properties scattered throughout the city (based on meeting the age criterion), historic district presence or absence was not determined. In addition, properties within the Willamette Historic District of the City of West Linn were surveyed to evaluate the contribution or non-contribution of outbuildings within the historic district. This information was included as an update to existing survey data compiled during the initial historic district survey, and included here.

To Be Completed by SHPO Staff

SHPO Evaluation of Survey Project

- Approved
- Conditionally Approved
- Returned for Corrections

SHPO Comment on NR Eligibility Evaluations

- Concur
- Do Not Concur
- Returned for Additional Data

SHPO Comment on Effect Determinations

- Concur
- Do Not Concur

Checklist of Required Items:

1. Completed "Cover Sheet" (in data base and hard-copy)
2. Research Design (highly recommended prior to field work)
3. Survey data submitted in electronic format
4. Properly labeled photos (digital photos incl. with data)
5. Properly marked survey map
6. Copy of USGS Map Showing Location of Surveyed Area
7. Final Report

Optional Items

- Completed Survey Forms (Field Forms)
- Expanded Final Report, including outline of relevant historic contexts
